

WELLHEAD ASSEMBLIES

REVISION 1

APPLICATION

Suitable for onshore and marine environments in safe and hazardous areas. For the termination and support of anode cables at deep well ground bed locations and for the safe ventilation of gases produced by high chlorine environments.

Cathodic Protection Co Ltd can manufacture a custom range of well head assemblies to suit your exact requirement. We can provide well head structures manufactured from a range of materials including GRP, Steel and Concrete. The well head design will generally incorporate the support and termination of anode cables, sufficient ventilation of gases generated in deep well ground bed locations and security / ingress protection to prevent tampering and environmental damage.
