

Concrete M28 Test Station

APPLICATION

A permanent durable test station used for the measurement of pipe to soil potentials, current flow, testing of insulated flanges, resistance bonds and anode outputs.

CONCRETE TEST STATION DATA

The test station consists of a preformed concrete post with a covered recess to contain a connection panel if required.

Cables are brought into the recess via a conduit inside the post, thus rendering the station completely weatherproof.

- Total length : 1219mm
- Depth : 95mm

Standard supply includes:

- Concrete test post
- Four brass bolts, nuts, fabric and steel washers
- Aluminum face plate (unmarked)

Optional extras

- Reed Switch – to enable IR free potential measurements to buried coupon, without opening the test post
- Termination boxes
- Customised polycarbonate or Traffolye cover plates
- Cable ID Tags
